****DO NOT USE HYDROCHLORIC ACID TO CLEAN NATURAL STONE & TILES****

****KEEP NATURAL STONE PROPERLY SEALED AT ALL TIMES -- INCLUDING ANY BULLNOSED OR EXPOSED EDGES -- USING A SUITABLE SEALER. AS A RULE-OF THUMB, WHEN WATER NO LONGER BEADS ON THE SURFACE OF STONE IT THEN REQUIRES RE-SEALING. STONE LAID IN SPACES SUBJECT TO RAINFALL, WATER SATURATION AND/OR RISING DAMP (EG: OUTDOOR & POOL AREAS, SHOWER RECESSES) MUST BE TREATED WITH A SEALER WHICH ALLOWS MOISTURE-VAPOUR TRANSMISSION. STONE MUST HAVE AN EFFECTIVE, WORKING SEALER BARRIER PRESENT AT ALL TIMES TO BE PROPERLY PROTECTED****

****ALWAYS WORK SAFELY WHEN CUTTING TILES & NATURAL STONE AND USE APPROPRIATE PERSONAL PROTECTIVE GEAR****

Contact Grant or Sean for project pricing on (07) 3355 5055

UNDERSTANDING NATURAL STONE

Q. What is natural stone?

A. Slate, granite, quartzite & marble are all examples of natural stones which are obtained from a quarry or mine, and are produced in a number of countries around the world. Natural stone is removed from the earth and cut to the required sizes (normally square & rectangular tiles & pavers) with minimal processing compared to kiln-fired/man-made materials.

Q. What colour tones are natural stones available in?

A. Being quarried from the earth, natural stones are available in a multitude of colours. Refer to your price list for the full current range of colours.

Q. Where can I use natural stone?

A. Most natural stones are very hardwearing and can be used both internally and externally on floors and walls. For example, areas such as: living rooms, entertainment areas, verandahs, swimming pool surrounds, kitchen splashbacks & feature walls can all be installed with natural stone. In many cases, you can select a single variety of stone to flow from internal areas to external areas without needing to change variety.

Q. Is natural stone slippery?

A. Many varieties of natural stone are a "split-quarried" material, which means they have a unique surface texture on every piece which helps give slip-resistance. This can make them ideal for outdoor areas.

Q. Is natural stone uniform in thickness or does it vary?

A. The majority of natural stone is processed to relatively uniform thicknesses by either a "calibration" or "block-sawing" machining process. Most calibrated & block-sawn natural stones are packed in boxes (similar to ceramic tiles) for ease of handling. Hand-cut (non-machined) slate is the only variety of natural stone which varies in thickness & edge-finish and is packed loose in wooden crates.

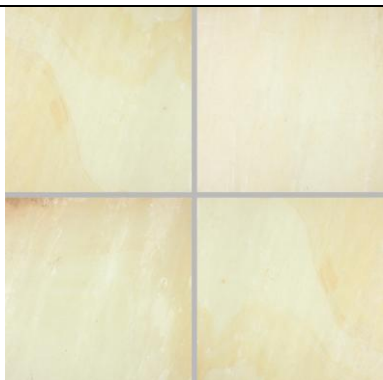

Q. How is natural stone laid?

A. Laying natural stone is very similar to laying ceramic tiles. Identical ceramic tile adhesives and grouts are used in the fixing process, and due to the rustic nature of natural stone, it is a very easily-laid material. Many do-it-yourself tilers with little or no tiling experience are successful at laying natural stone in their own home.

Q. Do I need to seal my natural stone and how do I maintain it?

A. Natural stone is sealed in all installations. There are two main types of sealers: "coating" and "penetrating" sealers. Coating sealers are used only internally and give a colour-enhancing "wet look" to your stone. Penetrating sealers are used both internally & externally and do not colour-enhance or change the appearance of the stone and they maintain the natural "dry look" of the stone. During installation, natural stone is usually sealed prior to grouting. Sealers will need to be rejuvenated at future intervals depending on the amount of surface traffic on the stone. As a rule of thumb, when water no longer beads on the surface of stone it then requires re-sealing. Regular mopping, sweeping & vacuuming is recommended at intervals to keep your natural stone looking good. Hydrochloric acid should never be used in the cleaning of natural stone.

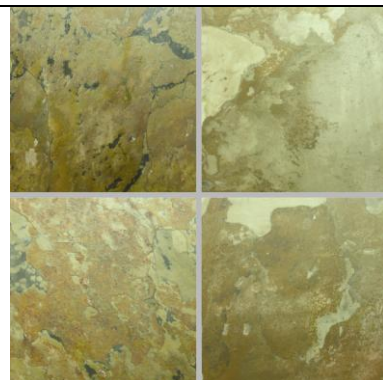

There are so many advantages in selecting a natural stone for your next tiling or paving project. Natural stone is an organic material with timeless appeal, has excellent thermal properties for energy-efficient homes, and is able to be approximately-matched for future add-on work to existing installations in years to come.
